“International Day of Clean Air for Blue Skies”.

7 September, 2022

Theme of year: ‘The Air We Share’

Chief Guest: Dr. D. M. Survase (Botany Department)

Chairperson: Prin. Hitendra Aher

Venue: Seminar hall

The UN General Assembly designated the Day to emphasize the need to make further efforts to improve air quality, including reducing air pollution, to protect human health. The importance and urgent need to raise public awareness at all levels and to promote and facilitate actions to improve air quality. Air pollution is the largest contributor to the burden of disease from the environment, and is one of the main avoidable causes of death and disease globally. 99% of the world's population is now breathing polluted air, warns WHO. 7 million people die each year due to air pollution, with 90% of them in low- and middle-income countries (WHO, Lancet Planetary Health)

The third International Day of Clean Air for blue skies will be held on 7 September 2022, under the theme of ‘The Air We Share’. It focuses on the transboundary nature of air pollution highlighting the need for collective accountability and collective action. Air pollution knows no national borders and is all pervasive. Moreover, it is strongly correlated to other global crisis such as climate change, biodiversity loss, other forms of pollution, social and gender parity as well as economic development.

The need to raise awareness about the problem, impact and solutions for air pollution; collection and sharing of data, research and best practices as well as strengthening international and regional cooperation.

## International Ozone layer protection Day

16 September, 2022

The ozone layer, a fragile shield of gas, protects the Earth from the harmful portion of the rays of the sun, thus helping preserve life on the planet. **This year the theme announced by the UN Environment Programme for International Day for the Preservation of the Ozone Layer 2022 is 'Global Cooperation Protecting Life on Earth.** Ozone is harmful at ground level but high up the atmosphere ozone layer plays a vital role in the protection of all living beings. The sun propagates ultraviolet radiations which as an adverse effect on living beings. This layer absorbs the radiations and prohibits them from entering the outer surface of the earth. The ozone layer resides in the stratospheric layer of the earth's atmosphere. The layers which occupy the lower part of the atmosphere removes the unwanted pollutants from the earth's surface.

The importance of ozone is that it protects the earth from harmful ultraviolet rays from the sun. The ozone layer is found in the upper regions of the stratosphere where it protects the earth from the harmful ultraviolet rays of the sun. These radiations can cause skin cancer in humans. The ultraviolet rays split the oxygen molecule into free oxygen atoms, these free oxygen atoms combine with the oxygen molecule to form ozone. This salient layer lies at a distance of 12-15 miles beyond the earth surface.

In this programme more than 250 students were participated. Students got the idea about ozone layer depletion causes like CFC, air pollution, global warming, burning of fossil fuel etc. We can overcome the pollution and protect the ozone layer.

**The National Wildlife Week**

2nd to the 8th of October, 2022

India is a biological hotspot which means it is home to a large variety of animal and plant species. India's flora and fauna are highly diversified and constitute more than 7 percent of the world's biodiversity. It also incredibly accounts for 7.4 per cent of the world's fauna. This highly biologically diversified country requires proper education and awareness to preserve this rich cover. Hence, the wildlife week was conceptualized.

This week is commemorated to increase the awareness among the common mass regarding the role of wildlife in maintaining nature's equilibrium. Any damage done to wildlife over a prolonged period of time endangers the entire ecosystem. So it is critical to protect it systematically, and through heart and soul. There is a symbiotic relationship between the forest, forest-dwelling animals, ecosystem services, and humans. With indigenous people now managing roughly 28 percent of forest land, the World Wildlife Week's mission is now much more relevant and significant.

Forests, forest species, and the livelihoods that rely on them are today at the intersection of many global crises, ranging from climate change to biodiversity loss and the health, social, and economic consequences. All of this makes it extremely essential to increase awareness regarding wildlife week amongst people.

The Indian Parliament enacted the Wildlife (Protection) Act in 1972, which provides for the safeguard and protection of the wildlife (flora and fauna) in the country. This is important legislation and forms an integral part of the environment and ecology.

Following programmes were arranged:

1. Elocution competition on wild life protection (18 students participated)
2. Poster competition (22 students participated)
3. Essay competition (52 students participated)
